

June 2010 has been a rainy one to say the least. Those that work outdoors may feel like it has rained almost every day in Des Moines, and in fact that feeling isn't too far from the truth. From the first of the month through June 23<sup>rd</sup>, there have been 19 days in which the Des Moines airport has received measurable precipitation (0.01 inches or greater). This means there have been only 4 dry days so far this month. The June record for number of days with measureable precipitation is 20, which was set in 1882. Unless Des Moines remains dry for the next week, we will at least tie or break this record. All this rainfall adds up to 9.83 inches, which ranks 6<sup>th</sup> place all time list for the month of June since records were kept in 1878.

Rank	Amount	Year
1)	15.79	1881
2)	14.19	1947
3)	13.45	2008
4)	12.16	1882
5)	9.91	1998
6)	9.83	2010*

\* Through June 23<sup>rd</sup>

The graph below shows how much rain has fallen each day in June.

In Waterloo the scenario is similar, though less extreme. There have been 15 days in the same time frame which the Waterloo airport has had measurable precipitation. This ranks tied for 5<sup>th</sup> all time behind 19 days in 1902 and 2000, and 16 days in 1942 and 1990. The total monthly rainfall for Waterloo is 6.15 inches, which is the 25<sup>th</sup> wettest since records were kept in 1895.

Rank	Amount	Year
1)	12.43	1947
2)	10.36	1998
3)	10.11	1993
4)	8.79	2008
5)	8.63	1980
25)	6.15	2010*

\* Through June 23<sup>rd</sup>
